

The diagram illustrates a 4-layer architecture. It consists of four stacked layers, each represented by a colored box with a corresponding icon and a list of components:

- Boundary Layer** (Pink box, icon: person): Contains *Client* and *Web Browser*.
- Client Control Layer** (Blue box, icon: gear): Contains *Client Control*.
- Server Control Layer** (Light blue box, icon: gear): Contains *Server Control*.
- Entity Layer** (Green box, icon: database cylinder): Contains *Entity*.

Arrows indicate the flow of data and control between the layers: from the Boundary Layer to the Client Control Layer, from the Client Control Layer to the Server Control Layer, and from the Server Control Layer to the Entity Layer. There are also feedback arrows from the Client Control Layer back to the Boundary Layer, and from the Server Control Layer back to the Client Control Layer.
